Experience

DeliveryHero (FrontEnd Engineer)

From Aug 2021 - Present

Working in newly formed team responsible for pre-ordering food delivery.

- Delivering new features, using React;
- Configuring ab-tests and tracking events;
- Researching, decoupling and estimating time for achieving long term goals (OKR's);
- Tests automation;
- Code review;
- Decoupling big tasks and connecting team-members;

AI consulting (2020 - 2021)

Optimising businesses processes using AI-solutions with my partner.

- Talking with clients and understanding their pains and goals, they are trying to achieve;
- Creation of technical specifications;
- Carry out initial research on ways for solving the issue;
- Estimating time and money costs;
- Hiring developers;
- Presenting and integrating final solutions into customers infrastructure.

Avito (Frontend Middle Engineer)

Dates Employed Feb 2020 – Jul 2021

Working on shipping and orders features.

- Onboarding new employees;
- Holding retros;
- Delivering big projects from idea to production(React/Golang);
- Code review;
- Multiple big task reseraches, which required connecting with different units.

Avito (Frontend Engineer Intern)

Dates Employed Aug 2019 – Feb 2020

I was working part-time, mostly on delivery-widgets and admin pages.

Side project - ggplay.ru, role of CTO

About me

I am a software engineer currently working in a position of a FrontEnd engineer. On this role I have over 2 years of being officially employed.

In one and a half year in Avito I've made a career path from intern to middle engineer. During this time I worked on multiple big projects, some of which I delivered fully from idea to production, supporting the backend side on GO language. I had to connect different people from different teams and sometimes even from different units. The tech stack we used: React, NodeJS, GO microservices, AB-tests.

Despite not very long official employment (2 years and 4 months) I think I have a very solid and broad experience in software development. I started as a Java developer when I was 16 years old and even received Java SE 7 Programmer ceriticate. I participated in multiple freelance projects.

University also gave me a very broad knoweledge on different Computer Science fields. For example my final thesis was on monocular depth estimation using convolutional neural networks.

I also was doing AI consulting with my partner delivering multiple solutions for buisnesses, such as call classifier integrated into clients call-center system. For some of the tasks I had to hire side-developers and manage their work.
